About the Conference

The 2026 Ohio Energy Conference will serve as Ohio's premier forum for connecting with potential clients, strengthening partnerships, and staying current on how the energy industry continues to grow and mature. Designed for energy providers, technology partners, policymakers, and consumers, the conference focuses on advancing resilience, reliability, and affordability across Ohio's evolving energy landscape.

Sponsors and exhibitors can expect strong alignment with their target audiences, engaged attendees, and expanded opportunities to connect with decision-makers from across the energy sector.

Since 2021, the Energy Coalition of Ohio has hosted four annual Ohio Energy Conferences, with attendance and engagement steadily increasing year over year. Feedback from the 2025 conference underscores this momentum: attendees reported high overall satisfaction, strong likelihood to recommend the event to colleagues, and a clear intent to return in future years. Participants consistently cited the quality of sessions and presenters, the relevance of topics, and the opportunity for meaningful networking as key reasons the conference delivered value.

Building on this success, the 2026 Ohio Energy Conference will take place over two days and place an even greater emphasis on networking, business development, and industry-specific focus areas from across the state. The conference will continue to bring together a broad cross-section of Ohio's energy community, highlighting innovators developing new technologies in Ohio, policymakers shaping state and federal energy policy, and national experts offering fresh perspectives and practical insights.

The 2026 conference will further strengthen what attendees value most: high-quality content, diverse discussion topics, and opportunities to build lasting professional relationships. Sponsors and exhibitors can expect strong alignment with their target audiences, engaged attendees, and expanded opportunities to connect with decision-makers from across the energy sector.

Together, the 2026 Ohio Energy Conference will continue to serve as a collaborative, solutions-driven platform, one that reflects the Energy Coalition of Ohio's commitment to inclusive dialogue and an All-the-Above approach as the state navigates its energy future.
